

## Coral Reef Gallery

The Philippine Coral Reef Tank focuses on the most diverse and fragile of marine ecosystems. From the main exhibit floor, visitors look down on a shallow, sandy lagoon—a calm, protected area inhabited by sharks, rays, and colorful fishes. Where the lagoon drops off to the deep reef, hundreds of bright fishes visible near the surface lure the visitor to view the spectacle one floor below. There, dramatic underwater views of the deep reef invite contemplation. Featuring 1,000 square feet of living coral and some 4,000 fish of 100 or more species, this 212,000-gallon exhibit is, at 25 feet, the deepest and one of the largest displays of a living coral reef in the world. Curiosity leads to exploration of several smaller galleries along the perimeter of the exhibit that highlight the unique adaptations and complex interactions of reef organisms.
