

Rainforest of the World Gallery

We begin our journey on the forest floor of a magnificent Neotropical Rainforest that fills one half of the Rainforest Dome and rises 90 feet to its ceiling. Winding our way up the spiraling ramp, we visit, in succession, plants and animals of three distinct and imperiled rainforests: Borneo, Madagascar, and Costa Rica. Each of these three specific rainforest exhibits, through their height in relation to the Neotropical Rainforest, focuses on a particular rainforest level—in Borneo, the forest floor; Madagascar, the mid-story; Costa Rica, the forest canopy. Departing from the canopy layer, we plunge (via elevator) back down through the Neotropical Rainforest to wonder at the below-surface view of the Flooded Forest of the Amazon.
